AUTOMATIC MODEL

Instruction

D. Automatic & Winding Mechanical model Notes:

automatic :- winding by rotor against hand motion , full wind up can run for 36-40 hours , can also wind up by crown .
Winding :- For winding and automatic models , before wearing , need to wind up 20-30 round in clockwise direction .

Water-resistance :-

All watches are fully tested in house, but water-resistance will be affected by crash , punch , natural worn off .
daily accuracy :-
+/- 60 second per day is normal for mechanical watch. Shock , temperature , magnetic field , can affect accuracy .
